**TOROMONT**  
Material Handling

Toromont Material Handling is your trusted one-stop-shop for all your material handling needs, including the increasingly critical energy component. Our goal is to maximize the productivity of your fleet and reduce your operational costs, while providing a safe environmental footprint.

### Energy Expertise

We strive to add value throughout the project lifecycle. Our Energy Solutions Specialists are experts in conducting power studies and energy fleet evaluations to achieve the ideal solution for your given application – and we are at your side from day one of your project.

### Extensive Product Line

We offer a wide range of industry-leading brands to bring you the best in performance and value. From traditional lead-acid batteries to advanced technologies such as Lithium-ion and our exclusive Hoppecke Uplift iQ system, as well as high-efficiency conventional, opportunity and fast chargers, we have the right solution for any requirement.

### Service & Support

We are here to help protect your investment. Our wide network of highly-trained technicians provide best in class after-sales support. We service and repair all makes and models of batteries and chargers, and we offer a comprehensive planned maintenance program tailored to suit your specific needs. Our battery technicians are trained both in-house as well as alongside industry leading manufacturers in North America and Europe to provide the best service available.

Toromont Material Handling is the exclusive Canadian distributor for Hoppecke batteries.

Whether your requirements include high performance, ultra-durability, extended runtime, low-maintenance or all of the above, Toromont Material Handling can provide the right solution to meet your motive power needs.

Engineered for safety and availability by Europe's largest battery producer, Hoppecke's air-mix solutions provide reduced charging times, lower energy and operational costs and longer service life.

#### Typical applications of trak uplift iQ Traction energy systems with Electrolyte Circulation:

- Medium- to Heavy-duty operation
- Multiple-shift operation without weekly equalizing charges

#### Your benefits with trak uplift iQ:

- Increased battery and vehicle availability
- Reduced energy consumption by up to 30%
- Watering frequency every 2 or 3 months only
- Reduced operational costs
- Longer life expectancy
